Published releases
7 releases of CICIDS2017 and 3 of UNSW-NB15, records as distributed, each with its own features and labels
Ground truth sources
CICIDS2017 attack schedule (LYCOS labelling script); UNSW-NB15 ground truth file
1 One clock
UTC for every release, with its offset and clock resolution
2 Conversation key
endpoint pair and protocol; a silence longer than T opens a new conversation; defined on the pooled records
3 One ground truth
one label per conversation; every record inherits it
4 N-way alignment
records per conversation in each release; pairing and cardinality for every pair of releases
5 Splits
conversation grouped, the same in every release; random flow split for leakage
Frozen table per benchmark and day
with a manifest of input hashes, settings and code version
Agreement (RQ1)
conversation and flow Jaccard, records per conversation, Krippendorff's alpha of the releases' own labels
Detection experiment (RQ2 to RQ4)
models trained per release; scored per flow and per conversation on the same test conversations
Published claims (RQ5)
each claim rebuilt per flow, then compared on shared conversations with one ground truth
